Thank you, Zizhuo. I processed your data, but found that you also mis-deleted one variable, "Compliance" (i.e., whether participants complied to protocols). I've copied this variable from your previous data into the one you just sent., so there is nothing else you need to do. However, if what I did was wrong, let me know.

Regards,
Kai Qin

Dear Kaiqin Chan,

We have received your request and carefully rechecked participants' answers to the MC questions and their conditions according to the original questionnaires of Study 1. After revising the datasheet based on their responses, we confirmed that all participants passed the MC.

Please find the corrected files attached. We sincerely apologize for any inconvenience caused and appreciate your patience. Please feel free to let us know if you have any further questions.

Best Regards,
Zizhuo Chen

Dear Zhang Xin,

May I humbly ask you to recheck two columns (Condition and MC) of your data for **Study 1**?

This is the computation for manipulation check pass/fail:

If Condition = 1 (suppress) & MC = 2 (not think), then MC result = pass.
If Condition = 1 (suppress) & MC = 1 (think), then MC result = fail.
If Condition = 2 (concentrate) & MC = 2 (not think), then MC result = fail.
If Condition = 2 (concentrate) & MC = 1 (think), then MC result = pass.

From my calculations, **only 35 participants passed your manipulation checks**, which is quite unlikely. It is likely that either your Condition or your MC values were recorded wrongly. If it's the latter, it's a simple fix since we can just assume every MC value is systematically coded wrongly. If it's the former, that's a bit tricky, because you might need to go back to their video files for each participant to ensure that the Condition variable was recorded correctly. But because **the "failed" manipulations do not appear to be random** across the datafile (they seem to affect only the first three-quarters of your participants), it could be that one of the coders did things correctly, and the other did things wrongly. Hence the solution does not appear to be as simple as correcting for the coding without knowing which coder was right or wrong.

I have attached your data here. Could you check and get back to me?

Thank you and regards,
Kai Qin
