I agree with you 100%, but unfortunately upon checking with the Editor, it seems like as long as a lab has made a serious attempt, they should not be excluded. So yeah please go ahead and process their data

Should I still process and file it then? As much as I empathize how difficult it can be to collect data, it does seem unfair to the other authors if we accept their work.

Here is another lab's data, they were only able to collect half of the required dataset unfortunately

Hi Adam,

I now have the coded data for both experiments. You can find the datasets attached. Please let me know if anything is missing or unclear.

Best wishes,
Florian

Thanks for the quick reply Florian, I look forward to your final data set!

Cheers
Adam

Hi Adam,

Thanks, hope you had great summer too. We made some progress, and are only still waiting for the coding of the second coder for Experiment 2.

Best wishes,
Florian

Hi Florian

Hope you had a restful summer break! It is mid September so Im just emailing to check with the progress, I look forward to your update

Thanks!
Adam

Hi Florian

The second option is correct, it acts as a baseline condition so only score 1 if the nontarget word is given in response to nontarget associates, e.g., mountain in response to hill when the target word is car

Thanks for reaching out
Adam

Hi Adam,

One question regarding the coding of Experiment 1: For the non-target columns, do we score 1 if people responded with *a* nontarget word to the nontarget associate (i.e., with any word that is not the target word, e.g., Eagle in response to Hill when Car is the target word) or do we only score 1 if people responded with *the* nontarget word to the nontarget associate (e.g., only Mountain in response to Hill when Car is the target word would give a 1).

Thanks a lot and have a nice weekend!
Florian
