Dear Kai Qin and Adam,

Thank you for checking with me. Sorry for my late reply. I was checking with Meilan and Noelle for this issue. After checking with them, they told me that they misunderstood the instructions. Initially, they assumed that the Excel sheet was only intended for the actual round (Phase 2) and interpreted “Period 1 only needs to be completed for initial concentration group” to mean that Period 1 should be completed for Condition 2, and Period 2 for Condition 1. Because of this, they coded the Phase 2 (actual round) data for all participants, but mistakenly placed the Condition 2 data under the Period 1 section instead of Period 2.

We have now corrected the dataset and updated the “Resolved” tab accordingly. Phase 2 data for Condition 2 have been moved to the correct Period 2 columns. We have also checked against the Meilan and Noelle tabs to confirm this was just a copy-paste error and not a larger issue.

Hope it is okay now :)

Best Regards,
Andree

Dear Andree,

I am currently analyzing data for Study 2's thought suppression RRR which you have taken part in. I'm attaching your data here.

While analyzing your lab's data, in the tab named *Resolved*, I discovered that in Condition = 2, there were no datapoints for Phase 2. Strangely, in Condition = 2, there were datapoints for Phase 1. Phase 2 is crucial because that's where the dependent variables are taken from. (On hindsight, Phase 1 does not need to be coded.) Could it be that, for Condition = 2, the data meant for Phase 1 was actually meant to be pasted in Phase 2? If that's the case, can you rectify and resend?

And if that was truly the case, may I humbly request that you check against the two tabs named *Meilan* and *Noelle*, just to be doubly sure that it is an innocuous copy-paste mistake, not something more serious (e.g., Condition = 2 was never run)?

Please update us when you have the answers.

Kai Qin

Hi Kaiqin

The SMU lab had an issue with S1 data so unfortunately they are only able to send us S2 data (attached)

Cheers
Adam

Hi Adam,

Here are the results for Study 2. Please let me know if there is anything else I should send. Thank you for leading and coordinating this project.

Best Regards,

Andree

Hi Adam,

Thank you for your understanding and clarification. I have just sent your reply to the team. Regardless, I agree and acknowledge that it is still an oversight. Again, I apologize for that. Regarding the number of co-authorships, I really don't mind to reduce it to be fair. It is a good learning experience for my students too. We will send you the results for Study 2 as soon as possible.

Best Regards,

Andree

Thanks for the clarification Andree

Noted on the situation. Since no further data can be collected, you can send me what you have for Study 2, and then when the time comes, I will ask the Editor for what can be done to minimise the damage for you guys in terms of authorship. I appreciate the work and effort that each lab put into this, and I sincerely hope that everyone that deserves to be listed is listed.

Just FYI, the OSF experimenter instruction document seems quite unambiguous, so not sure why this was the sentiment - please see highlighted portion below:

accordingly.

5. Experimenter then starts video recording and tells the participant: "*I will leave the room now and you can start the actual trials whenever you are ready. Please remember to also continue the first task at the same time*".
6. Upon task completion, the participant sees a screen that instructs them to knock on the

Moreover, I mentioned in the briefing session that "to save time, coding can be done alongside data collection *with the exception of the suspicion probe*, which should be left until data collection has terminated so that experimenters are not unblinded". The thing that surprised me personally was that even if this instruction from the briefing session was missed or misinterpreted, and even if they wanted to do the coding at the very end, I thought they'd at least check the first 1 or 2 participant's video recordings to make sure that they have been correctly recorded and saved (just out of general cautiousness). Oh well, I guess various individual differences, oversights, and misinterpretations etc are part and parcel of these large projects, and they should be good learning experiences regardless.

I look forward to your S2 results, thanks again for the stellar effort!

Adam

Hi Adam,

Thank you for your message and for summarizing the situation. Yes, you are right the issue we encountered in Study 1. I apologize for any inconvenience this may have caused.

But to be fair to the students involved, I was told that the lack of video recordings actually stemmed from ambiguities in the procedural instructions provided. My students who were in-charge of training the experimenters told me that while you did mention the recording procedure in the Zoom meeting, it

appears that there was a misalignment with the written instructions on the OSF, which did not explicitly state the need for screen recording. Also, my students opted to do the coding after the experiment and were not scheduled to do simultaneous coding because the experimenters were instructed to remain blind to the study conditions to prevent bias.

Thank you for your understanding.

Best Regards,

Andree

Hi Andree

Thanks for the update, just to confirm that i have the correct understanding, for study 1, instead of coding alongside data collection to minimise risk, your experimenters decided to leave all the coding to the end, and then realised that the video had not been correctly saved, rendering study 1 data invalid. Study 2 is all fine. Is this the correct understanding?

Cheers

Adam

Hi Adam,

I would like to update and discuss with you regarding the data collection and coding process for this project. As mentioned previously we have collected more than 240 participants for Study 1 + Study 2.

Participants pre-exclusion:

study 1 - 124

study 2 - 135

Participants post-exclusion:

final sample size for study 1 - 120

final sample size for study 2 – 122

When our team is going to work on the coding, we realized that there were technical difficulties for Study 1. Specifically, the team was unable to save/locate the screen recordings of the PsychoPy part of the study. As a result, there is a lack of visual data that is necessary for us to determine whether the participant responded to the target and non-target associate word. While there is audio recording of the participants, the lack of screen recording made us unable to code the columns labelled “target.low”, “target.high”, “nontarget.low”, “nontarget.high.” Despite exploring several alternatives for quite a while, we haven’t found a feasible solution to proceed with the coding for these variables. Will be happy to share with you the data that we have for Study 1. Do let us know if you have any advice for the team.

Given the resource-intensive nature of this project, collecting more data may not be feasible. If there is no good solution for Study 1, could we consider completing the coding for Study 2 and concluding the project with that? Regarding the authorship, I am open to reducing the number of co-authors from five to three, or even two. Our student co-authors have been compensated for every hour they contributed to this project as research assistants.

Do let me know what you think about this and how to proceed. Thank you so much.

Best Regards,

Andree

Hi Adam,

Happy New Year! Thank you for your email. Sorry for our late update. Just want to you know that we have completed our data collection last month (n = 240). We are now left with the required coding. My students will be able to start the coding when they are back from their travelling next week. Will keep you updated.

Best Regards,

Andree

Hi Everyone

Hope you had a restful break. It's been another 6 months so once again I am emailing you for an update. Some of you have told me that you'd struggle to have everything completed by Dec 2023, so I have spoken to the Editor and we have agreed to extend the deadline to mid 2024 - can each of you please let me know if everything at your lab is on track for completion by May 2024?

Sorry for the repeat emails if we have been in touch recently. Thanks and I look forward to hearing from you all

Happy new year!

Adam
