Dear Adam,

Please find attached our final scored data.

- Results_sheet_study1_hussey_elson.xlsx and Results_sheet_study2_hussey_elson.xlsx contain the data scored in the way you requested and should be used in the analyses.
- The files with "_excluded" appended at the end contain the participants who were excluded on the basis of failing the manipulation check. I wasn't sure whether you wanted these in different files, but since they're excluded anyway we elected to separate them. This also made it easier to recycle participant codes, since you wanted the randomisation method to be stratified random sampling with equal numbers per groups.
- Lastly, the Results_sheet_study2_hussey_elson_all_narrow_scoring.xlsx file contains the data for study 2, but scored using the narrow scoring method for all stimuli, rather than than the narrow method for tiger and gorilla and the broad for disease and food. We scored it both ways to assess the impact of this on the results.

The analyses.Rmd and analyses.html files provide the inter-rater reliability estimates in our sample, which were all very high. This files also contains an analysis of the impact of scoring the data both ways (narrow vs broad) on the results. As you can see, changing the scoring strategy causes a Cohen's d = .35 difference in the average number of mentions-and-bell-rings of the target word. And, in our sample at least, changing the scoring strategy changed the results of Study 2 themselves: Using the agreed upon broad scoring strategy the effect was significant with Cohen's d = .45, using the narrow strategy it was non-significant and Cohen's d = .37. Together, these results highlight the potential for how heterogeneity in scoring method (i.e., if the individual sites are required to use the broad scoring strategy, and this is carefully checked that they did indeed do it) can influence the results, in terms of the magnitude of the effect or the heterogeneity between sites.

We would therefore like to again ask that this project actively checks that the sites have scored the data in the same way, rather than merely instructing them to do so and assuming this instruction was adhered to.

Best wishes
Ian

Hey Adam

Very sorry for the delay, we should be able to send you everything next week!

Cheers
Malte

Hi Malte and Ian

It's mid October so I am just emailing the remaining labs a final reminder to send me the results by end of month. Thanks again for all the hard work! We look forward to receiving your datasets by end of month.

Cheers
Adam

Hey Adam

Sorry for being slow to respond. We have multiple deadlines right now, but will get back to you shortly!

Cheers
Malte

Hi Ian and Malte

Its been another couple of weeks so just following up on this email

Looking forward to hearing from you guys!

Hi Ian and Malte

Hope all is well! Its early September so I am just emailing the remaining labs for an update on when we should expect to receive the final datasets

Best regards
Adam

Ah you're right - I think we're done with study but we haven't sent it on to you. I'll do this next week.

Hi Ian

Sorry I forgot to ask - why was it study 1 that was specifically mentioned? Has Study 2 data already been sent to me (perhaps I missed it)?

Hi Adam,

I wanted to touch base to make sure we're still meeting the timeline. It's looking like it will be the third week of June before my RA will have the data for study 1 scored and returned to you. Is this timeline still workable for you?

Best wishes
Ian
