Sure, here it is!

For Study 1 for subjects 269 and 296, the experimenter selected the wrong words to display on Pavlovia. For Study 2 there are some unique cases that I commented. There were also some technical difficulties where there was no screen recording, and I wasn't sure if you wanted us to leave that participant condition in the spreadsheet or not.

I think my lab manager (cc'ed here) will be better able to address this as he was the one directly overseeing the RAs who actually ran the sessions. Viet Hung, do you have more details on this or should I follow up with Katie and Elle directly?

Thanks,
Ben

Thanks for the stellar effort Ben! Can you just help clarify what you mean by presenting the wrong word set? That is, which study are you referring to and what was the specific error?

Thanks again!
Adam

Hi Adam,

We have finished data collection and have entered everything into the spreadsheets, which I am attaching here. We have left a few participants in where there were experimenter errors (e.g., they showed the wrong word set). My guess is that we should exclude these, but I thought we'd leave these in for now and let you make the decision (e.g., if you wanted to treat that participant as being in the other counterbalancing group). There are not too many of these cases, but if you have any further questions please let us know and we can clarify the specifics of those situations. Also, I wanted to note that we did collect data from more participants than the requested sample size (i.e., over 80 in each study). This was done just for pragmatic scheduling reasons and we were again unsure how this project is handling that, so we left all the participants in (i.e., feel free to drop those participants if necessary). Please do let us know if you have any further questions and thanks again for organizing this effort!

Best wishes,
Ben
