Dear Kai,
I appreciate your patience. We checked with Inês, the person who coded the data (in CC), and it was a matter of wrong interpretation of the question about the probe. None of our participants realized the goal of the experiment.
Warm regards,
Marília Prada

Assunto: Re: Request: Clarification about your data

Dear Marilia,

I have not heard back from you regarding my queries about the three columns (all involving the probe) of Study 1.

While processing the data you submitted for Study 2, I discovered the same issue — all participants failed the probe, which was quite unlikely.

May I request that you check the probe data for Studies 1 and 2? If it's a coding mistake, then this can be easily resolved.

Regards,
Kai Qin

Subject: Request: Clarification about your data

Dear Marilia,

May I humbly ask you to recheck three columns (probe.coder1, probe.coder2, probe.final) of your data for **Study 1**?

In the study, to admnister the suspicion probe, you would have said something like this to the participant: "*Before we move on, if you think you know the study's aim already (e.g., if you have participated in a similar study before), please write below what you think the aim is. If you are unaware or unsure, please simply write X*".

For these three variables, the codings should be: 1 = fail probe, 0 = pass probe. **In your data, all participants failed the probe, which is quite unlikely.**

I have attached your data here. Could you check and get back to me?

Thank you and regards,
Kai Qin
