Hi Kaiqin,

Thanks for the reminder. We've cross-checked the data sheet against the participants' handouts, and you were right — there was indeed an error in the MC values. They were recorded in the reverse relative to the intended computation.

Please find attached the corrected version of the spreadsheet.

Apologies for the oversight and any inconvenience this may have caused.

Best regards,
Hoo Keat

You don't often get email from kaiqin.chan@jcu.edu.au. Learn why this is important

Dear Hoo Keat,

I don't think I received your reply to my request to recheck the manipulation check data of Study 1. May I know your answer?

Kai Qin

Subject: Request: Clarification about your data

Dear Hoo Keat,

May I humbly ask you to recheck two columns (Condition and MC) of your data for Study 1?

This is the computation for manipulation check pass/fail:

If Condition = 1 (suppress) & MC = 2 (not think), then MC result = pass.
If Condition = 1 (suppress) & MC = 1 (think), then MC result = fail.
If Condition = 2 (concentrate) & MC = 2 (not think), then MC result = fail.
If Condition = 2 (concentrate) & MC = 1 (think), then MC result = pass.

From my calculations, the number of people who passed your manipulation checks would be zero, which is quite unlikely. It is likely that either your Condition or your MC values were recorded wrongly. I have attached your data here. Could you check and get back to me?

Thank you and regards,
Kai Qin
